                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            inflammatory pelvic disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies and kinase antagonists may also be used to down regulate kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           complementary sequences may also be used as DNA probes in diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Plowman GD,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAZ38983 standard; DNA; 30
                                                                                                                                                         The present invention describes the monomer, 1,3-propanediol (I), which is biologically produced by using a transformed host cell (C) comprising at least one copy of gene encoding BtuB, BtuC and BtuD. (I) is produced by the steps comprising: (1) contacting the transformed (C) with at least one fermentable common source and an effective amount of vitamin B12. The transformed (C) comprises at least one copy of genes encoding a protein having dehydratase activity (a), a protein having an oxidoreductase activity (b), a vitamin B12 receptor precursor protein (C), a vitamin B12 transport system permease protein (d), and a vitamin B12 transport system permease protein (d), and a vitamin B12 transport by the permease protein (d), and a vitamin B12 transport by the permease protein (d).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Synthetic:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         28-FEB-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Whited GM,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  12-MAY-1999;
                                      ATP or GTP-binding protein (e); and (2) recovering (1) produced by (1). The method is used to produce (1) which is employed in the manufacture of polyester fibre, polyurethane and cyclic compounds. The method produces 1,3-propanediol rapidly and it is inexpensive. The present sequence represents a primer used in the construction of expression vectors in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      mRNAs and even in those cases, where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Multiple gene expression; filamentous fungal cell; EST; expressed sequence tag; Fusarium venenatum; Aspergillus niger; Aspergillus oryzae; Trichoderma reesei; identification; recombination;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of
                                                                                                                                                                                                                  22-MAR-1999;
                                                                                                                                                                                                                                                                                                  22-MAR-2000; 2000WO-US07781
                                                                                                                                                                                                                                                                                                                                                                                           28-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO200056762-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Aspergillus niger

sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and to the complementary service of an oligonucleotide sequences defined in the specification, where oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the of an oligonucleotide comprises a sequence comprises a 5'-end particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 without are specialised methods. AAH03166 to AAH13628 and AAH13633 represent human amino acid sequences; AAB92446 to AAH36393 represent oligonuclectides, all of which are used in the exemplification represent oligonuclectides, all of which are used in the exemplification to the complementary strand of a polynucleotide which comprises one the 5602 nucleotide sequences defined in the specification. full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary complementary strand of a polynucleotide which comprises a in gene therapy. The particularly full-The primers are useful for synthesising polynucleot 1-length cDNAs. The primers are also useful for the a combination eotides of

The present sequence is a nucl in the exemplification of the invention.

Note: The sequence data for this patent did not form specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       mutant of coryneform bacterium, measuring expression amount an analysing the expression profile or expression pattern of a ge from Coryneform bacterium, and identifying a homologue of a gram coryneform bacterium. Coryneform bacteria are useful for amino acids, nucleic acids, vitamins, saccharides and organic particularly L-lysine. The present sequence is a nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    are useful for identifying the mutation point of a gene derived from mutant of coryneform harterium massuring for the massuring for the massuring for the massuring for the first form the form that the form the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nakagawa

Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags -
```

Claim 87; Page 1796; 3161pp; English.

The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of genes same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be identified and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an array equals one gene or open reading frame, and organisation of the microorarrays based on function of the gene products to facilitate enaltysis of the results. AAF07478 to AAF11847 represents ESTs from Aspergillus oryzae; and AAF14879 to AAF11853 represents ESTs from Aspergillus oryzae; and AAF14879 to AAF11854 to AAF11857 from Trichoderma reesei, which are all specifically claimed in the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (UYHE-) UNIV HELSINKI LICENSING LTD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAT37909-T37915 represent the coding sequences for the vascular endothelial growth factor (VEGF) proteins of the invention, which profession the invention of the invention, which professions the invention of the invention of the vascular endothelial or mesodermal cell proliferation. VEGF is also a endothelial or mesodermal cell proliferation. VEGF is also a gradual proliferation of the vascular glycosylated cationic dimer, and is sometimes referred to as vascular glycosylated cationic dimer, and is sometimes referred to as vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; Page 61-62; 107pp; English.

VEGF has diverse effects, depending on t specific biological context in which it is found. VEGF is a potent endothelial cell mitogen, and directly contributes to induction of angiogenessis in vivo by promoting endothelial cell growth during nor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  embryonic development, wound healing, and tissue regeneration/reorganisation. The VEGF proteins of the invention share regeneration/reorganisation. The VEGF proteins of the invention share the angiogenic and other properties of VEGF, but are distributed and the angiogenic and other properties of VEGF. The proteins can therefore be expressed in tissues differently to VEGF. The proteins can therefore be expressed in tissues differently to VEGF. The proteins the used to accelerate angiogenesis in wound healing. Antibodies can proteins can be used for inhibiting angiogenesis. The antibodies can proteins can be used diagnostically to quantitatively detect VEGF. In primers also be used diagnostically to quantitatively detect VEGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        complementary to the coding sequences for the proteins of the invention can also be used to detect VEGF-B coding sequences. Quantification of VEGF-B in cancer biopsy specimens may be useful as an indicator of metastatic risk. VEGF-B expression in a cell can be retarded using antisense sequences direct against the VEGF coding sequences, this is antisense sequences direct against the VEGF coding sequences, this is especially useful in retarding VEGF expression in tumour cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 624
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAV63569 standard; cDNA; 624 BP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (VEGF)-B186. VEGF proteins are used for promoting proliferation of endothelial cells and for stimulating angiogenesis (the proliferation of new capillaries form pre-existing blood vessels). These activities of new capillaries form pre-existing blood vessels). These activities are useful for treating tissue growth and repair, including organ repair. This is also useful in pregnancy, in follicle development, as these processes must occur in development of the placenta. The as these proteins can also be used to raise antibodies, either for use in detection of the proteins or as inhibitors of their action. This is detection of the proteins or as inhibitors of their action. This is detection of the proteins or as inhibitors of their action. This is detection of the proteins or as inhibitors of their action. This is detection of the proteins or as inhibitors of their action. This is detection of the proteins or as inhibitors of their action. This is detection of the proteins or as inhibitors of their action. which are involved in the lighin biosynthetic pathway. The polynucleotides can be used for modulating lighin content, lighin composition and the structure of a plant, especially eucalyptus and pine species, and for modifying the activity of an enzyme involved in lighin biosynthetic pathway, and for producing a plant having altered lighin content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any organism and for PCR amplification. The lighin content can be efficiently modified using the polynucleotides. AAA67908 to AAA68201 and AAB16341 to AAB16449 represent polynucleotide and protein sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                  laccase, peroxidase, ferulate-5-hydroxylase (F5H), alpha-amylase, caffetc acid methyl transferase, caffeoyl CoA methyl transferase, comerate COA ligase, cytochrome P450 LXXIA, diphenol oxidase, flavano glucosyl transferase, flavenoid hydroxylase, and isoflavone reductase,
